PROJECTS

KnowVerse | *(React/Redux, Flask)*

[live](#) | [github](#)

- Ensured user privacy and autonomy through frontend and backend authentication measures and React Router, allowing users to only access and make changes to their own reservations when logged in.
- Utilized React state to allow a smooth single page experience for users to add or delete cards when creating their sets without having to save the cards.
- Adhered to React and ES6 best practices to generate a true single page reactive web app experience.

Meet-Up | *(React/Redux, Express)*

[live](#) | [github](#)

- This will be an amazing bullet point on something amazing about the project. Maybe it is specific about the challenges you had and what you did to overcome them specifically.
- Incorporated React-Redux container and Redux selector patterns to architect highly scalable and uni-directional front-end state management.
- Managed scheduling and booking CRUD through custom transactional database operations using Active Record and PostgreSQL.

Goaly | *(React/Redux, Flask, AWS)*

[live](#) | [github](#)

- Adhered to React and ES6 best practices to generate a true single page reactive web app experience.
- Utilized AWS S3 to implement user image uploads reducing server load and allowing for scalability of image services.
